Peritoneal Dialysis (PD) – Intraperitoneal Bactrim Administration

**1. Purpose**
To ensure the administration of intraperitoneal Bactrim is performed according to best practice guidelines reducing the risk of infection and ensuring patient safety

**2. Process**

2.1 Devices

2.1.1 Equipment

- Trolley
- Portable IV pole
- Alcohol swabs x 2
- Blue clamp

2.1.2 Key parts

- Bactrim 400/80 mg in 5 ml ampoule
- Drawing-up needle (18G)
- 21 G needle
- 5 ml syringe
- PD fluid (Freeline Solo bag)

2.1.3 Key site

- Rubber bung on PD fluid
- Abdominal PD catheter

2.2 Recommended Intraperitoneal Dose for treatment of Peritonitis

- Daily dose of 1600/320 mg divided into 400/80 mg/bag for 14 – 21 days
2.3 Procedure
1. Warm the selected PD fluid (freeline solo bag) on the warmer
   a. Select appropriate PD fluid strength by conducting a fluid assessment on patient 30 minutes prior to CAPD procedure
   b. Note: PD fluid takes 30 minutes to warm.
2. Ensure the “5 Rights” of Principles for Safe Medication Administration is observed with second person check
3. Perform hand hygiene
4. Identify and gather equipment and key parts for procedure
5. Check expiry dates on antibiotic ampoule and PD fluid
6. Clean trolley/work surface with detergent
7. Perform hand hygiene
8. Don gloves
9. Prepare general aseptic field equipment and key parts near the patient’s bedside
10. Use the sharp edge of the blue clamp to open outer pouch of the dialysis bag. DO NOT USE SCISSORS OR KNIVES
11. Place the opened bag on top of the clean trolley and ensure the lines are facing up
12. Recheck the dialysis bag strength, volume, expiry, colour and for leakage
13. Prepare the antibiotics using aseptic technique ensuring all the key parts/sites are protected
   a. Alcohol swab the Bactrim ampoule and break top to open;
   b. Attach drawing up needle to 5 ml syringe;
   c. Aspirate all content of Bactrim ampoule into the 5 ml syringe;
   d. Replace drawing-up needle with 21G needle.
14. Administer the antibiotics into the dialysis fluid using aseptic technique ensuring all the key parts/sites are protected
   a. Alcohol swab the rubber bung on dialysis fluid;
   b. Push needle into the centre of the dialysis fluid bung and inject all content.
      Note: For accidental piercing of the bag or the side of the bung, use a new dialysis fluid
15. Administer Bactrim intraperitoneally through CAPD exchange as per Continuous Ambulatory Peritoneal Dialysis (CAPD) Freeline Solo Exchange Procedure; Renal Department Protocol
   a. Note: Dwell intraperitoneal Bactrim for 6 hours
16. Wear PPE
17. Discard bag and lines in the clinical waste bin, discard needles in sharps bin
18. Remove gloves and PPE
19. Perform hand hygiene
20. Clean trolley after use and perform hand hygiene
21. Sign and co-sign the medication chart
22. Document the procedure on the CAPD chart and patient notes
23. Handover to the next shift
