Experiences through Conservative Management

“Patients with CKD,
particularly those with ESRD
are among the most
symptomatic
of any chronic disease
group.”

A typical conservative client's journey

Conservatively managed ESKD patients

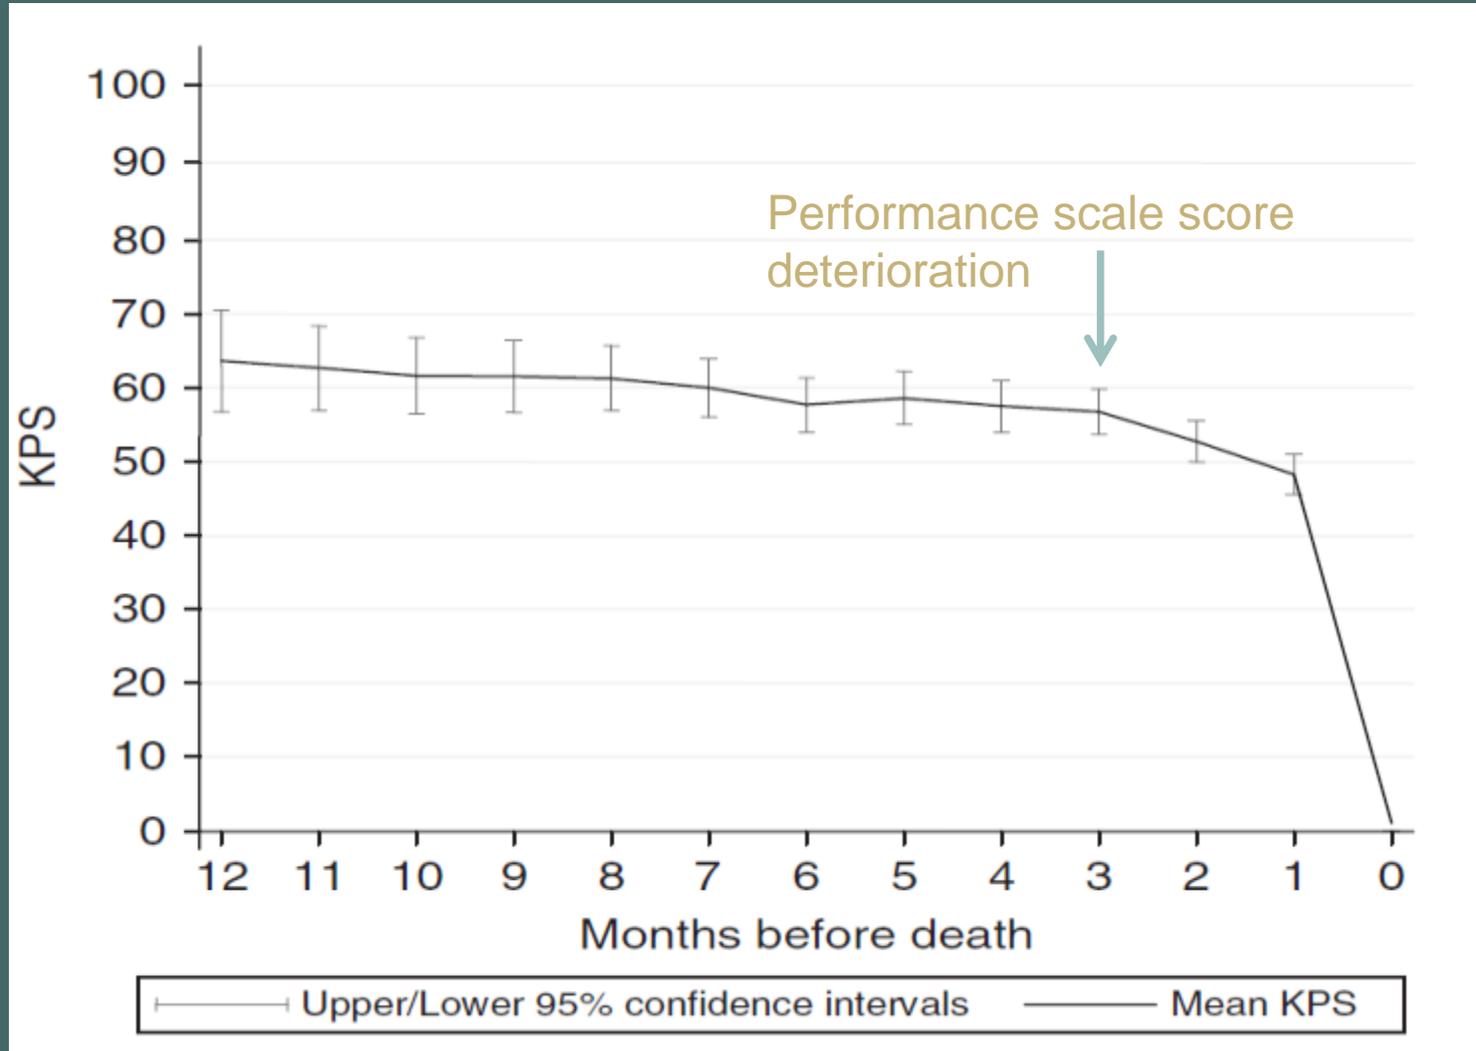

Figure 2. Trajectory of mean Karnofsky Performance Scale (KPS) score over the last year of life for those who died (N = 46).

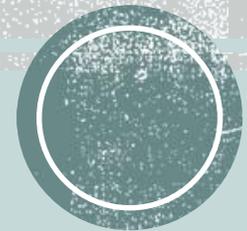

What's important to Patients as EoL draws closer?

- A Good Death
- Choice of location for Death
- Resolution of psychosocial issues
 - Family Estrangement
 - Leaving a Legacy
 - Ensuring those they are concerned about will be ok after they're gone
